THE CHALLENGE & OUR SOLUTION

Earlier risk assessment for better maternal and neonatal outcomes

Gestational diabetes mellitus (GDM) affects millions of pregnancies worldwide and is associated with increased risks for both mother and child.

In current clinical practice, diagnosis usually occurs between weeks 24 and 28, leaving limited time for preventive interventions.

Veritatem aims to shift risk assessment into the first trimester. Using explainable artificial intelligence and routinely collected clinical information, the system identifies patients at elevated risk earlier, enabling targeted monitoring and timely lifestyle interventions.

Why timing matters

-  Earlier preventive measures
-  More individualized patient monitoring
-  Reduced pregnancy complications
-  Better outcomes for mothers and babies
-  Lower long-term healthcare costs

Clinical Timeline — The Power of Early Detection

WITH VERITATEM

Early risk assessment enables earlier action

Key benefit

Earlier identification → earlier action → more time for effective intervention → better outcomes for mother and baby.

OUR PRODUCT

AI-Assisted Clinical Decision Support

Veritatem is a software-as-a-medical-device (SaMD) that estimates gestational-diabetes risk early in pregnancy using routinely collected clinical data and explainable AI.

Key features

- 

Early risk prediction

Risk assessment in the 1st trimester, months before standard OGTT.
- 

Explainable AI

Per-patient explanations and feature importance for transparency.
- 

Seamless integration

Designed to integrate with EHR systems and clinical workflows.
- 

Human oversight

AI supports, clinicians decide. Built for safe and trusted use.
- 

Regulatory-ready SaMD

Developed in compliance with EU MDR and AI Act requirements.

Intuitive dashboard for informed decisions

Predicted risk

Confidence interval

Explainable. Transparent. Trusted. Every prediction is accompanied by clear explanations and confidence information to support clinical decisions.

How Veritatem works

Built for clinical reality

- 

Safe

Designed for patient safety and reliability.
- 

Transparent

Clear explanations and audit trail built-in.
- 

Integrated

EHR compatibility and workflow friendly.
- 

Secure

Data privacy and security by design.
- 

Scalable

Built to grow with healthcare systems.

LARGE MARKET. CLEAR PATH TO IMPACT.

From a multi-million patient opportunity
to a scalable, profitable business.

TAM–SAM–SOM FUNNEL

Multiple layers of opportunity.

SCALE ECONOMICS CURVE

Unit cost per screening falls as volume grows,
while value per screening remains high.

DEFENSIBLE POSITION (THE MOAT)

A unique combination that is hard to replicate
and built for long-term advantage.

★ Sustainable advantage comes from the bundle, not the model.
Individually, each element can be copied. Together, they create a moat.

BUILT FOR COMPLIANCE. DESIGNED FOR IMPACT.

Veritatem is developed as a regulated Software-as-a-Medical-Device (SaMD) in full alignment with EU regulations and international best practices.

REGULATORY FRAMEWORK

Veritatem is designed to meet the highest standards for safety, privacy and transparency.

International standards we adhere to

PRODUCT LIFECYCLE

A regulated journey from concept to continuous improvement.

GO-TO-MARKET ROADMAP

Step-by-step approach to build traction and scale sustainably.

KEY SUCCESS ENABLERS
